

Here are two examples for each of the main control flow structures in JavaScript: `if...else` statements, `for` loops, `while` loops, and `switch` statements.

#### ### Example 1: `if...else` Statements

```
```javascript
let temperature = 25;

if (temperature > 30) {
  console.log("It's a hot day!");
} else if (temperature >= 20 && temperature <= 30) {
  console.log("The weather is pleasant.");
} else {
  console.log("It's a cold day.");
}
```
```

#### ### Example 2: `for` Loop

```
```javascript
for (let i = 1; i <= 5; i++) {
  console.log("Iteration " + i);
}
```
```

#### ### Example 3: `while` Loop

```
```javascript
let count = 0;

while (count < 5) {
  console.log("Count is: " + count);
  count++;
}
```
```

#### ### Example 4: `switch` Statement

```
```javascript
let dayOfWeek = "Monday";

switch (dayOfWeek) {
  case "Monday":
    console.log("It's the start of the week.");
    break;
  case "Friday":
    console.log("Weekend is approaching.");
    break;
}
```

```
default:
  console.log("It's a regular day.");
}
```

These examples cover the basic control flow structures in JavaScript.
