

HTML Images:

In HTML, you can include images using the `` element. Here are three examples of how you can use the `` element to display images on a webpage:

1. **Basic Image Tag:**

The most straightforward way to include an image is by using the `` tag with the `src` attribute pointing to the image file's URL or relative path.

```
```html
<!DOCTYPE html>
<html lang="en">
<head>
 <meta charset="UTF-8">
 <meta name="viewport" content="width=device-width, initial-scale=1.0">
 <title>Example 1</title>
</head>
<body>

</body>
</html>
```
```

2. **Image with Width and Height:**

You can also specify the width and height attributes to control the size of the image on the webpage.

```
```html
<!DOCTYPE html>
<html lang="en">
<head>
 <meta charset="UTF-8">
 <meta name="viewport" content="width=device-width, initial-scale=1.0">
 <title>Example 2</title>
</head>
<body>

</body>
</html>
```
```

3. **Image with a Link:**

You can wrap the `` tag with an `<a>` tag to make the image a clickable link. This is commonly used for creating image-based navigation.

```
``html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Example 3</title>
</head>
<body>
  <a href="https://example.com">
    
  </a>
</body>
</html>
``
```

Remember to replace "path/to/your/image.jpg" with the actual path or URL of your image file. The `alt` attribute in each example provides alternative text for the image, which is important for accessibility and SEO.
