I'll provide you with two code examples for each of the topics: Transitions and Animations, Transforms, and Fonts and Text Styling. Please note that these examples are written in HTML and CSS.

1. Transitions and Animations:

Example 1: Simple CSS Transition

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Transition Example</title>
  <style>
    .box {
      width: 100px;
      height: 100px;
      background-color: blue;
      transition: background-color 0.5s ease;
    }

    .box:hover {
      background-color: red;
    }
  </style>
</head>
<body>
  <div class="box"></div>
</body>
</html>
```

Example 2: CSS Animation

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Animation Example</title>
  <style>
```

```html
    @keyframes slide {
     from {
      transform: translateX(0);
     }
     to {
      transform: translateX(200px);
     }
    }

    .box {
     width: 100px;
     height: 100px;
     background-color: blue;
     animation: slide 2s ease infinite alternate;
    }
  </style>
</head>
<body>
 <div class="box"></div>
</body>
</html>
```

2. Transforms:

Example 1: Scale Transformation

```html
<!DOCTYPE html>
<html lang="en">
<head>
 <meta charset="UTF-8">
 <meta name="viewport" content="width=device-width, initial-scale=1.0">
 <title>Transform Example</title>
 <style>
    .box {
     width: 100px;
     height: 100px;
     background-color: blue;
     transition: transform 0.5s ease;
    }

    .box:hover {
     transform: scale(1.2);
```

```
    }
  </style>
</head>
<body>
  <div class="box"></div>
</body>
</html>
```

Example 2: Rotate Transformation

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Transform Example</title>
  <style>
    .box {
      width: 100px;
      height: 100px;
      background-color: blue;
      transition: transform 0.5s ease;
    }

    .box:hover {
      transform: rotate(45deg);
    }
  </style>
</head>
<body>
  <div class="box"></div>
</body>
</html>
```

3. Fonts and Text Styling:

Example 1: Custom Font

```html
<!DOCTYPE html>
<html lang="en">
```

```html
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Font Example</title>
  <style>
    body {
      font-family: 'Arial', sans-serif;
    }

    .custom-font {
      font-family: 'Pacifico', cursive;
      font-size: 24px;
    }
  </style>
</head>
<body>
  <p class="custom-font">This text uses the Pacifico font.</p>
</body>
</html>
```

Example 2: Text Styling

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Text Styling Example</title>
  <style>
    .styled-text {
      color: #3366cc;
      font-size: 18px;
      font-weight: bold;
      text-decoration: underline;
      text-align: center;
    }
  </style>
</head>
<body>
  <p class="styled-text">This text is styled with different properties.</p>
</body>
</html>
```

```

Feel free to experiment with these examples and modify them according to your needs!
