Python Inbuilt Functions:

Certainly! Here are some examples of how to use the built-in functions in Python:

1. `print()`:

```python
print("Hello, world!")
```

This will output "Hello, world!" to the console.

2. `input()`:

```python
name = input("What is your name? ")
print("Hello, " + name + "!")
```

This will prompt the user to enter their name and then print out a greeting using their name.

3. `len()`:

```python
string = "Hello, world!"
print(len(string))
```

This will output the length of the string, which is 13.

4. `range()`:

```python
for i in range(5):
    print(i)
```

This will print the numbers 0 through 4 to the console.

5. `sum()`:

```python
numbers = [1, 2, 3, 4, 5]
print(sum(numbers))
```

```
```

This will output the sum of the numbers in the list, which is 15.

6. `min()`:

```python
numbers = [3, 2, 1, 4, 5]
print(min(numbers))
```

This will output the minimum value in the list, which is 1.

7. `max()`:

```python
numbers = [3, 2, 1, 4, 5]
print(max(numbers))
```

This will output the maximum value in the list, which is 5.

8. `abs()`:

```python
print(abs(-5))
```

This will output the absolute value of -5, which is 5.

9. `round()`:

```python
print(round(3.14159, 2))
```

This will round the number 3.14159 to 2 decimal places and output 3.14.

10. `sorted()`:

```python
numbers = [3, 2, 1, 4, 5]
print(sorted(numbers))
```

This will output the sorted list of numbers, which is [1, 2, 3, 4, 5].

These are just a few examples of how to use the built-in functions in Python.
