HTML headings Examples:

Example 1: Simple Document Structure
```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Example 1</title>
</head>
<body>

    <h1>Main Title</h1>

    <p>This is a paragraph of text in the main section of the page.</p>

    <h2>Subsection 1</h2>

    <p>This is content under the first subsection.</p>

    <h3>Sub-subsection 1.1</h3>

    <p>More detailed information goes here.</p>

    <h2>Subsection 2</h2>

    <p>Content for the second subsection.</p>

</body>
</html>
```

In this example, you can see a clear hierarchy with a main title (`<h1>`), two subsections (`<h2>`), and a sub-subsection (`<h3>`).

Example 2: Styled Headings
```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Example 2</title>
```

```html
    <style>
        h1 {
            color: #3498db;
            font-size: 28px;
        }
        h2 {
            color: #2ecc71;
            font-size: 24px;
        }
    </style>
</head>
<body>

    <h1>Styled Main Heading</h1>

    <p>This is a paragraph of text in the main section of the page.</p>

    <h2>Styled Subsection</h2>

    <p>Content for the styled subsection.</p>

</body>
</html>
```

In this example, the headings are styled using CSS. The `<h1>` has a blue color and larger font size, while the `<h2>` has a green color and a slightly smaller font size. Styling can be adjusted according to the design preferences of the webpage.
